Other sizes available upon request, call or email for a price quote. Sizes wider than 60" will be quoted on a custom order basis. 300dpi output is standard, 600dpi is available for those who have enough resolution to benefit from it. 600 dpi output offers extra smooth detail, only useful if there is fine print in your design or your images have very detailed high resolution drum scans or renderings. If two prints were printed at 300dpi and 600dpi, and were being viewed from more than 4 feet away, one would not be able to distinguish any difference between them. — Usually smaller size prints (less than 24x36) can benefit from it because the smaller the print, the closer people are viewing it.

If a specific media type you are looking for is not listed, please call or email us, we have access to any type of printable material.
